

Nagabhatla Rama Koushik

Entry level Network Engineering

Annaram, India • 7989237906 • koushiknagabhatla@gmail.com • <https://www.nrkportfolio.com> • [LinkedIn](#) • [GitHub](#)

PROFILE

B.Tech Computer Science student with strong hands-on experience in designing, configuring, and troubleshooting enterprise-level networks. Skilled in multi-switch and multi-router topologies, VLANs, OSPF, STP, EtherChannel, ACLs, and Layer-2 security features on Cisco IOS. Strong in subnetting, packet analysis using Wireshark, and systematic troubleshooting. Seeking an entry-level Network Engineer, NOC Engineer, or Network Support role where I can contribute from day one and continue growing.

EXPERIENCE

2026

Network Engineer Intern, SK Jalrakshak Innovations (SKJAL)

- Configured and maintained access-layer switching for the office LAN and IoT deployments: VLAN assignment, 802.1Q trunking, EtherChannel uplinks, and RPVST+ tuning.
- Deployed and verified static, default, and single-area OSPF routing between site routers, correcting next-hop and routing-table errors that left subnets unreachable.
- Isolated day-to-day faults with ping, traceroute, and Cisco show commands, backed by Wireshark captures of ARP, DHCP, DNS, TCP/UDP, and ICMP traffic.
- Hardened the access layer using Port Security, DHCP Snooping, Dynamic ARP Inspection, and BPDU Guard; kept topology diagrams, addressing plans, and config backups current.

EDUCATION

2023 – Present

Bachelor of Technology in Computer Science and Engineering, D.N.R College of Engineering and Technology

Expected graduation: May 2027.

2021 – 2023

Intermediate (MPC), Sri Prakash Junior College

PROJECTS

2026

Enterprise Campus Network Design

- Designed and implemented a multi-switch campus LAN with departmental VLANs, 802.1Q trunking, inter-VLAN routing, and structured hierarchical IP addressing.
- Configured DHCP, Rapid PVST+, EtherChannel, static & default routes, single-area OSPF, ACLs, SSH management, and Layer-2 security controls.
- Validated full end-to-end connectivity and systematically isolated faults using ping, traceroute, show commands, routing tables, and interface status checks.

2026

Multi-Router WAN & OSPF Routing Lab

- Built a multi-router topology practicing IPv4/IPv6 addressing, static routes, default routes, and single-area OSPF.
- Verified routing behavior through neighbor adjacency checks, routing-table analysis, and end-to-end connectivity tests.
- Troubleshoot common Layer-2 and Layer-3 issues including incorrect gateways, interface problems, addressing errors, and misconfigured routing.

SKILLS

Networking

TCP/IP • OSI Model • Ethernet • IPv4/IPv6 • VLSM & Subnetting • ARP • ICMP • DNS • DHCP • NAT/PAT

Routing & Switching

Cisco IOS • VLANs • 802.1Q Trunking • Inter-VLAN Routing • STP/RPVST+ • EtherChannel • Static & Default Routing • OSPF

Network Security

ACLs • SSH • Port Security • DHCP Snooping • Dynamic ARP Inspection • BPDU Guard • Basic AAA Concepts

Troubleshooting & Tools

Ping • Traceroute • Cisco Show Commands • Routing Table Analysis • Wireshark • Cisco Packet Tracer • Linux

Additional

Python (Basic Network Automation) • Bash • Git/GitHub • REST API Concepts • VS Code
